Company Name Change

As an Eddy Current and SLOFEC™ Testing & Solution specialist, Kontroll Technik UK Ltd. is operating successfully as an “independent company” since end of year 2002. Our main goal is to provide quality and innovative inspection solutions either with our own technologies or together with that of our partners. The growing activity in the international market, the company structural changes in 2003, as well as the increasing inspection solution development projects, have shown the need to adapt the company name towards an internationally understandable company name. Furthermore we wanted to express with the new company name our idea of the collective inspection services and inspection solutions we provide, which is innovative inspection. Therefore we feel our new company name reflects this idea:

innospection Limited

We are proud to inform that the process of a smooth company name change from Kontroll Technik UK Ltd. over to Kontroll Technik UK – Innospection Ltd. and finally to innospection Limited is now complete. From 1st April 2006 we are officially trading as “innospection Limited”.

We would like to stress that ONLY the company name has changed. The MD, Managers and Staff remain the same, as do the company registration number, VAT number and all communication numbers. Email and Web Site addresses will be phased out gradually over the coming year.

We hope the new company name will be found interesting as well as showing our initiative towards our intention to continuously supply “Innovative Inspection”.

Regular InnoNews are published from now on to inform about our latest innovations & activities.

Yours sincerely
Andreas Boenisch

Managing Director

From our offices in Rugby and Aberdeen we provide the advanced inspection services & solutions throughout the UK.

Our network in Norway, the Middle East and the Asia Pacific regions, facilitates easy access for the industries that require our expertise and advanced inspection services.

Our Services

Our main focus is the eddy current inspection service & testing application development. Our main inspection areas are as following

Tube Inspection

Inspection of Ferromagnetic & Non Ferromagnetic Tube Materials

SLOFEC™

Fast Corrosion Screening with high detection sensitivity from thin to thick wall materials

- Pipe Scanning
- Tankfloor Scanning
- Vessel Scanning

Crack Detection

Using the eddy current technique with advanced equipment for crack detection

Eddy Current Testing Solutions

Inspection application development
e.g. Drill Pipe Inspection,
Internal pipe scanning
